

CHAPTER I INTRODUCTION

FOREWORD

This Service Manual has been prepared to help you profitably service the new V-4 60 horsepower outboard motor. Although this motor is quite new in design, basic operation, servicing and repair is similar to the smaller single and two cylinder two-cycle outboard motors. Therefore the general information given in the service manual prepared for the other motors in our line will prove useful in servicing the 60 horsepower outboard motor.

Where essential, step-by-step procedures have been given. However, since different service men have different ways of doing things, in most cases the necessary information for accomplishing the work is given with essential details highlighted.

ARRANGEMENT OF MANUAL

This manual is arranged in chapters as indicated in the Table of Contents. The manual is bound loose leaf so that as changes are made to the motor, supplements can be issued to this manual to bring it up to date. These supplementary pages can be inserted in the manual, either replacing present pages, or as new pages. Page numbers on supplementary pages indicate where the pages should be inserted. For example, all pages with 3- before the page number belong in Chapter Three. This same individual numbering for each chapter is used for illustrations.

SERVICING PROBLEMS

Always feel free to write regarding service problems which are troubling you. However, be sure to check the service manual for information before writing. Often we receive inquiries for information already fully covered in the service manual. When writing for information, be sure to give complete information, including motor model number and serial number.
